

MANTASHA

DevOps & Cloud Intern | AWS · Docker · Terraform · CI/CD · Linux

mantashafoze@gmail.com | linkedin.com/in/mantasha-clouder | github.com/MantashaR

PROFESSIONAL SUMMARY

Aspiring DevOps Engineer with hands-on experience in AWS, Docker, Terraform, Jenkins, GitHub Actions, Linux, and Prometheus/Grafana monitoring. Built a multi-cloud cost optimisation platform for an HCLTech industry project and an AI-augmented DevSecOps pipeline. Skilled in Python and Bash scripting for automation.

TECHNICAL SKILLS

Cloud (AWS): EC2, ECR, S3, IAM, VPC, Lambda, CloudWatch, RDS, Route 53, CloudFormation

Containers: Docker (build, image management, containerization)

Monitoring: Prometheus, Grafana dashboards, alerting rules, application & business metrics

CI/CD: Jenkins, GitHub Actions, pipeline design, automated build & deploy workflows

Infrastructure as Code: Terraform, AWS CloudFormation

Linux & Scripting: Linux administration, troubleshooting & networking fundamentals; Bash/Shell scripting; Python automation

Networking & Security: VPC design, IAM least-privilege access, HTTPS, REST APIs, AES encryption, secure credential storage, Semgrep, Trivy

Databases & Streaming: MySQL, RDBMS, Apache Kafka

Currently Learning: Kubernetes (pods, deployments, services), EKS

RELEVANT PROJECTS

Multi-Cloud Cost Optimisation (HCLTech Industry Project) | github.com/MantashaR/multi-cloud-cost-optimisation

- Built a Django/Celery platform ingesting AWS, Azure, and GCP billing data, with Isolation Forest anomaly detection and Prophet forecasts.
- Generated Terraform right-sizing scripts with projected savings; added Prometheus metrics, Grafana dashboards, and alert rules.

AI-Augmented DevSecOps Pipeline | github.com/MantashaR/AI-DevSecOps-Pipelines

- Built a GitHub Actions workflow that scans every pull request with Semgrep (SAST) and Trivy (SCA), parsing results from SARIF.
- Used an LLM to triage each finding by severity and generate a code-level fix, then auto-opened a fix PR with the patch applied.
- Added a self-validation re-scan, a finding-hash cache to cut repeat LLM calls, and an MTTR dashboard; shipped as a GitHub Action.

AWS Static Website Hosting | github.com/MantashaR/aws-static-website-hosting

- Deployed a static website on Amazon S3 with custom bucket policies and IAM least-privilege access controls.
- Hosted it on an Ubuntu EC2 instance with Nginx, configured security groups and SSH, and automated Nginx restarts with a Bash script.

Advanced Password Manager | github.com/MantashaR/Advanced-Password-Manager

- Built a Python password manager with AES encryption, master-password authentication, and strong-password generation.
- Stored credentials in an encrypted local vault, with pytest unit tests covering the core functionality.

Additional Academic Projects

- **Movie Recommendation System** — TMDb 5000 recommender using TF-IDF, K-Means clustering, and cosine similarity (Scikit-learn).
- **Traffic Simulation System** — C++/OOP console program cycling traffic-light states with timed delays and colored console output.

CERTIFICATIONS

- AWS Academy Graduate — Cloud Foundations (Credly Verified), Amazon Web Services
- AWS Academy Graduate — AWS Cloud Developing (Credly Verified), Amazon Web Services
- AWS Cloud Practitioner Essentials (Udemy)
- Linux Essentials Certification (Cisco Networking Academy)
- MySQL Database Certification (Oracle)
- Networking with Cisco Packet Tracer (Cisco Networking Academy)
- Cyber Threat Management (Cisco Networking Academy)

EDUCATION

Bachelor of Computer Applications (Cloud Computing & Virtualisation)

Galgotias University, Greater Noida | 2024 – Present
